Professional Profile

Master of Computer Science (Data Science and AI) candidate at the University of Sydney, completing coursework in November 2026. Commercial experience building Python- and SQL-based ETL workflows, automating data processing and reporting, and validating data across PostgreSQL and MySQL databases. University projects include a PostgreSQL database with trigger-based business logic and machine learning classification models. Seeking graduate and junior roles in data engineering and data analytics across Australia.

Core Competencies

- **Programming:** Python, SQL, PL/pgSQL
- **Data Engineering:** ETL Development, Data Transformation, Data Cleaning, Data Validation, Data Integration, Data Quality
- **Databases:** PostgreSQL, MySQL, Relational Data Modelling, ER Modelling, SQL Query Optimisation
- **Data Analysis & ML:** Pandas, NumPy, scikit-learn, Excel, Machine Learning
- **Tools & Practices:** Git, GitHub, VS Code, Jupyter Notebook, Agile

Experience

Software Engineer (Part-time)

Feb 2023 – Jan 2025

SAAC IT Solutions Pvt Ltd, Hyderabad, India

Approx. 10 hours/week alongside full-time undergraduate studies

- Developed and maintained Python ETL pipelines to extract, transform and load CSV, Excel and JSON data into PostgreSQL and MySQL databases for business reporting.
- Wrote SQL queries to validate data loads, reconcile record counts and generate business reports.
- Automated recurring data processing and reporting workflows with Python (Pandas), reducing manual spreadsheet preparation.
- Built data quality checks (duplicates, nulls, consistency, reconciliation) and resolved failed loads by tracing root causes through execution logs.
- Worked in Agile sprints with code reviews and Git/GitHub pull requests, and documented ETL workflows and database changes.

Key Project: RideThe15 – Rideshare & Carpooling Platform

- Built data-processing workflows and operational dashboards and scorecards with daily, weekly and monthly trend analysis.

Business Analyst Intern

Jul 2022 – Jan 2023

SAAC IT Solutions Pvt Ltd, Hyderabad, India

- Gathered, analysed and documented business requirements, translating operational processes into structured functional requirements.
- Developed Python automation scripts to process inventory, sales and customer data from Excel, CSV and other structured sources.
- Created reusable validation scripts (Pandas, NumPy) to detect missing values, duplicates and formatting issues, and validated imported records in SQLite and PostgreSQL databases.
- Prepared functional and UAT test scenarios, performed API testing with Postman, and documented workflows and user guides.

Key Project: Wood Management System – Timber Depot Operations & Billing

- Supported purchase, sales, stock and pricing requirements for a multi-depot billing system, validating master data and transaction reports.

Projects

Predicting High-Priority Crime Threats in NSW

2025

University of Sydney – Group project

- Transformed 30 years of NSW BOCSAR crime data across 60+ offence subcategories from wide monthly time series into a model-ready dataset, normalising counts to rates per 100,000 population.
- Engineered trend features (5-year slope, momentum, volatility, peak year) and compared five classifiers (Random Forest, SVM, Logistic Regression, Naive Bayes, Decision Tree), with Random Forest and SVM reaching ~95% accuracy.

Car Dealership Database System

University of Sydney – Group project

- Built a 12-table PostgreSQL database from ER and relational models, enforcing data integrity with primary/foreign keys, CHECK constraints and cascading rules.
- Developed PL/pgSQL functions and triggers to automate business rules, including sale price calculation, vehicle status updates, option limits and payment completion tracking.

- Implemented a Python (psycopg2) feature to update car sale records with input validation and parameterised SQL queries, and performed end-to-end application testing.

Forest Cover Classification & Diabetes Risk Analysis

Mar 2025 – May 2025

University of Sydney – Pair project

- Cleaned and explored a health survey dataset using Pandas and Seaborn (deduplication, missing-value imputation, range validation) to analyse diabetes risk factors.
- Built an SVM (RBF kernel) classifier in scikit-learn to predict forest cover types, applying feature scaling, one-hot encoding, PCA, class weighting and RandomizedSearchCV with stratified cross-validation, achieving 67% test accuracy.

Education

Master of Computer Science (Data Science and AI)

Feb 2025 – Present

University of Sydney, Sydney, Australia

Coursework completion: November 2026 | Degree conferral: 2027

Achievements: Sydney Scholars India Scholarship (2025), awarded by the University of Sydney for academic performance, leadership and community engagement.

Bachelor of Technology – Computer Science Engineering

Mar 2020 – Jun 2024

Gokaraju Rangaraju Institute of Engineering and Technology (GRIET), Hyderabad, India

Leadership & Volunteering

Volunteer – Professor Harry Messel International Science School, University of Sydney

May 2025 – Jul 2025

- Supported students and international participants with activities, logistics and day-to-day queries during the academic program.

Secretary – IEEE Computer Society Student Chapter, GRIET

Mar 2023 – Apr 2024

- Coordinated technical workshops, student and faculty communications, event documentation and engagement activities.

Certifications

Azure Databricks Fundamentals | Tableau Visualization & Design | What Is Generative AI?
